

Tips for Taking Quality Pictures

Place the hand strap on the tablet for stability when taking pictures. This may help the clarity of the photos.

Hold the tablet from the bottom or alternating corners when taking a picture. It is easier to hold in the landscape position.

The camera will take the picture faster in a well-lit area. Have direct light behind you when taking a photo.

Avoid zooming when possible. Move closer to subject for better quality pictures.

Turn on the grid lines in the camera settings.

Change the picture size to 3.7M (1:1).

Take photos in the Sports Mode.

Use the volume button on the side of the tablet to take the picture rather than the button on the screen.
